11 September 2026

Mr. Robert Muwanga
Kampala, Uganda

An introduction, on the recommendation of Juliet

Dear Mr. Muwanga,

My colleague Juliet suggested that I write to you and share my CV, and I am glad to do so.

My name is Wasswa Wilson. I am a data analyst, biomedical engineer and full-stack software developer based in Kampala, with over nine years of work across health research, data systems and software engineering. I would welcome a conversation about where my experience could be useful to you or your network.

Current data analysis and reporting

At FairBanks Medical Centre, I analyse health data in Python and SQL, define indicators and validation rules, and build management reporting dashboards for the FairBanks Community Health Intelligence Platform. I design its data capture tools and cloud data flows, check the quality of the records behind the reports, and build automated auditing and verification tools. I also work with MATLAB and Excel.

Regional biomedical programme leadership

As Biomedical Programs Manager at the Gould Family Foundation, I led biomedical engineers and technicians across Uganda, Kenya, Tanzania, Burundi, Malawi, Somaliland and Rwanda. I directed regional programme planning, implementation and reporting, maintained equipment and lifecycle records, and led training for engineers, technicians and clinical staff.

Research and analysis

I began at the Uganda Virus Research Institute doing laboratory data analysis, mathematical modelling and research pipeline design in Python. At International Hospital Kampala, where I managed the biomedical function for four years, I developed oxygen consumption formulas during the COVID-19 response and tested them against hospital demand to support supply and capacity planning.

Proposal and grant writing

I write and edit what FairBanks submits: community health project proposals, accelerator and fellowship applications, investment proposals and partnership documents, with the financial annexes and supporting evidence.

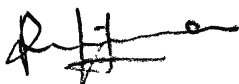

Hospital software development

I am the founder and developer of HOSSPI (<https://hosspi.com/>), a hospital management system connecting patient records, clinical care, laboratory and pharmacy workflows, billing and reporting. It also supports biomedical engineering and role-based access. I am also building a cross-sector application for data collection and reporting.

I have attached my CV, together with a single file containing this letter, the CV and my academic and professional credentials. I would value a short conversation at your convenience, whether about work within your own firm or simply to be pointed towards others who may find this useful.

Thank you for your time, and please pass on my thanks to Juliet.

Yours sincerely,

Wasswa Wilson

Data Analyst, Biomedical Engineer and Software Developer
